

## Detect the earliest signs of Glaucoma and Macular Degeneration

Vision Source Olmos Park is proud to offer the most advanced diagnostic technology for eye disease detection. It's our duty to help ensure that your eyes stay healthy during your lifetime.

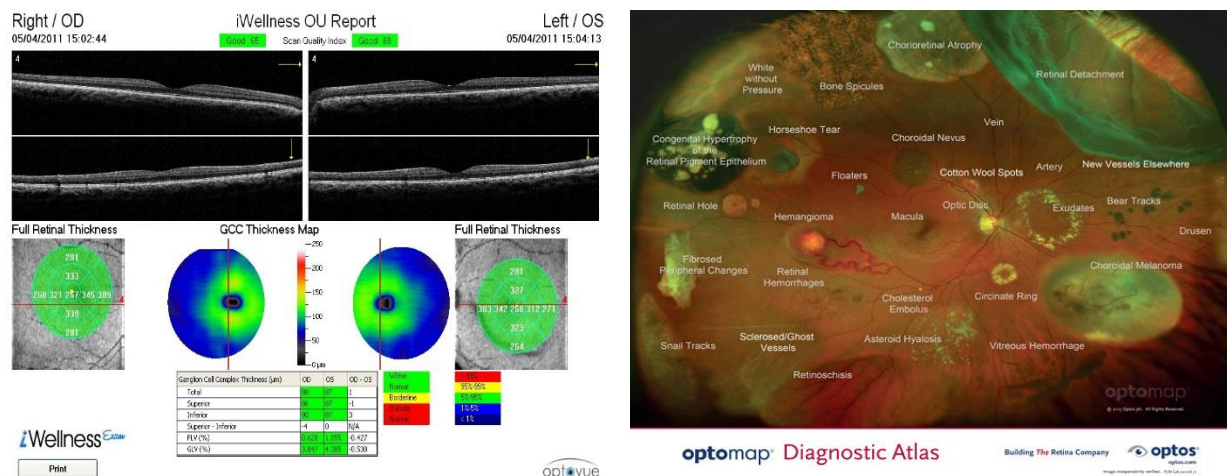

### Earlier detection. Easier detection.

Most sight-threatening eye diseases like glaucoma, diabetic retinopathy and macular degeneration are **hidden inside the eye without any symptoms**. The iWellness Exam is a quick, non-invasive set of scans that allow your doctor to **see greater detail on and beneath the surface of your retina, seeing things that could otherwise go unnoticed**.

### Leave the Office with Normal Vision

Most patients hate the dilating drops because of the resulting blurred vision, light sensitivity and added exam time. Our iWellness Exam screening often eliminates the need for dilation and **you can leave the office with normal vision**.

Examples of macula/glaucoma scan below LEFT. Widefield retina view on RIGHT.

Please notify the front desk of your preference:

Yes, I want the iWellness scan. Additional \$20 not covered by insurance will be added to your exam today. (Recommended by Dr. Deviney)

I prefer dilation with eye drops. I understand that my near vision will be blurry and I will experience light sensitivity for 4 to 6 hours, which can make it uncomfortable to drive.
