

Detect the earliest signs of Eye Diseases

Our Doctors are required to look inside your eyes and tell you that your eyes are healthy (or not).

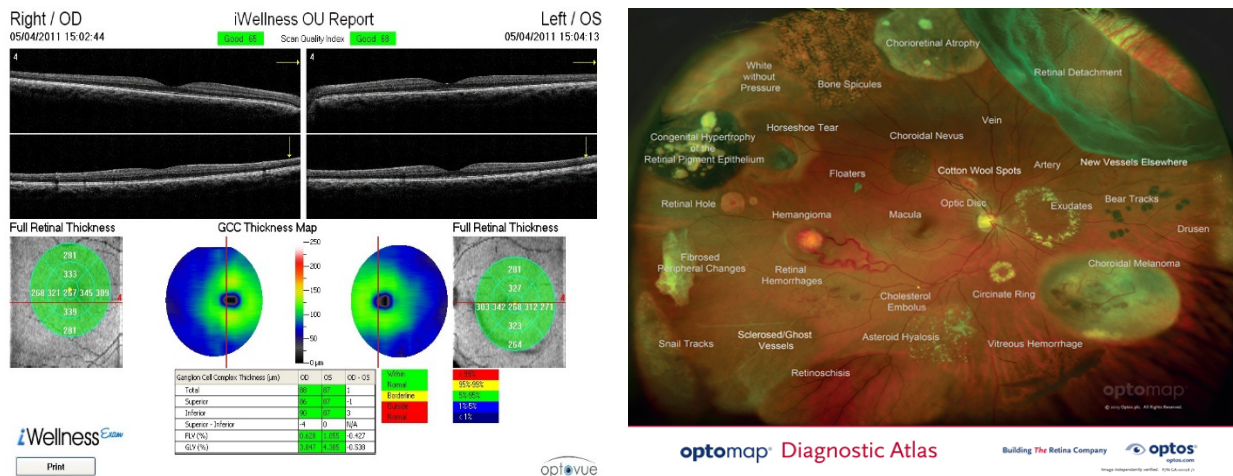

Earlier detection. Easier detection.

Most eye diseases are **hidden inside the eye without any symptoms**. We have the technology to **see the earliest signs in just a few seconds**.

Leave the Office with Normal Vision

Dilation causes blurred vision, light sensitivity and added exam time. Our iWellness Exam screening can eliminate the need for dilation and **you can leave the office with normal vision**.

Examples of macula/glaucoma scan below LEFT. Widefield retina view on RIGHT.

Please notify the front desk of your preference:

**** NO DILATION ****, I want the iWellness scan so I can **leave with normal vision**.
 Additional \$28 not covered by insurance will be added to your exam today.

OR

**** OK FOR DILATION **** drops (covered by your insurance). I understand that my near vision will be blurry and I will experience light sensitivity for up to 6 hours, which can make it uncomfortable to drive.
